

ADAPTIVE COMPOUNDING STRATEGY (ACS)

Asset Revesting: An adaptive strategy that actively monitors and adjusts investments in a portfolio using an asset hierarchy by selling assets that are no longer appreciating and reallocating capital into assets rising in value to avoid missing rallies or worried the market is topping.

Consistent Gains: Aims to capture long-term growth with ETFs in all market conditions. It attempts to avoid large losses during market corrections, while generating gains through multi-year bear markets using bull and bear ETFs, for indexes, bonds, currency, and cash.

Compound Growth: Designed to optimize growth and efficiency, helping you retire years earlier, with more money, to enjoy a richer and more enjoyable retirement.

Dividend Income: Monthly dividend payments provide an additional stream of recurring income when the strategy holds specific positions, providing quality trades and above average returns.

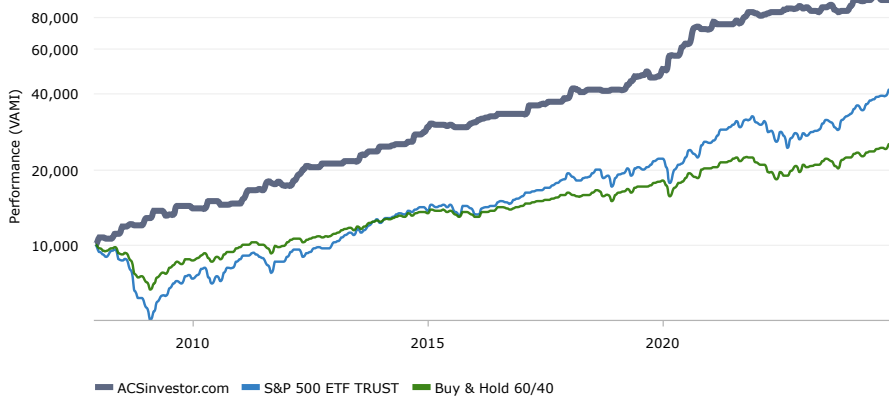

Alert Signals or Autotrading: Follow the asset revesting trade alert signals or have them executed for you automatically in your brokerage account. A true done-for-you active active investing strategy that focuses on capital protection and removes emotions and bias from the process.

STRATEGY DETAILS

Newsletter	Technical Traders Ltd.
Inv. Style	Systematic/Technical,Tactical Asset Allocation,Multistrategy
Securities	Bull & Bear ETFs
Leverage	1 : 1
Trade Alerts	Autotrading Available / Newsletter, Email, App

GROWTH OF \$10,000 USD

The graph represents the cumulative performance of a hypothetical \$10,000 investment. Performance is compounded. Returns do not reflect dividend income, the payment of any brokerage commissions, brokerage costs incurred as a result of buying or selling shares, or the subscription fee and do not reflect the deduction of taxes.

STRATEGY OBJECTIVE

The Adaptive Compounding Strategy ("ACS") is a revolutionary multi-asset revesting strategy the outdated investment industry doesn't want you to discover.

Harness 75+ years of market expertise to save time and stress while maximizing returns. ACS dynamically evolves with market conditions, compounding growth while protecting your account from market declines—build wealth confidently while navigating market uncertainty.

ACS helps investors and advisors outperform by solving the major investment issue of holding assets falling in value. It seeks to achieve this investment objective by investing in S&P 500, Nasdaq 100, US Treasuries, Dollar Index, and inverse ETFs relevant to The Technical Traders' investment theme of protecting capital. At times up to 100% of strategy allocation will be in a defensive cash position, and it can have 5-12 trades per year.

STRATEGY PERFORMANCE

	YTD	5 Yrs	Since 2008	Maximum Drawdown
